

**UNDERHILL'S NEW M-115 SOD CUP DESIGNED  
FOR SPORTS FIELDS WITH NATURAL OR SYNTHETIC TURF**

LAKE FOREST, CA

The M-115, a powerful long-throw sprinkler with a built-in natural turf sod cup, is now available from Underhill for use on all parks and large sports fields, including football, soccer and baseball venues.

The M-115 features a 115-foot throwing radius and an 8" pop-up height. The sod cup is 4" deep and holds a 9" wide section of natural grass. It is available as a valve-in-head or block model.

Underhill's M-115 virtually disappears when not in use, a feature that provides protection against vandalism and damage from mowing equipment. The resulting seamless playing surface improves field performance and safety, helping to prevent sports injuries.

The M-115 can be installed on either natural turf or synthetic fields where it is ideal for cooling and washing down playing surfaces before games, reducing skin burns.

With the growing popularity of synthetic turf on high-use facilities, long-throw sprinklers like the M-115 are an increasingly practical alternative that requires less water, installation materials and labor.

Most large rectangular sports fields generally install three full-circle M-115 sprinklers inside the playing area, along with eight part-circle heads at the sidelines. Professional baseball fields require between six and nine M-115-F sprinklers, supplemented by (16) M-115 part-circle heads at the infield edge and along the warning track.

The M-115 part-circle heads are adjustable from 30° to 360° and can be switched into full-circle mode to syringe the infield and warning track areas.

The M-115 is also available with a green or tan artificial turf cup or with a standard plastic green or tan cover.

Underhill also features the M-160, a 160-foot-radius pop-up sprinkler designed for natural and synthetic turf on sports fields. For more information about Underhill long-throw sprinklers, call Underhill toll free at 866-863-3744 or see the complete product line at [www.underhill.us](http://www.underhill.us).

Underhill offers an expanding line of irrigation products for sports fields and golf courses, including Pellet Pro wetting agent applicator, Magnum and Precision hose-end nozzles, traveling Tracker portable irrigation and FCI Profile stainless steel hose-end nozzles.

The company is headquartered in Lake Forest, CA, and has been in business for more than 25 years.
